Project description: Proyojon is basically a web-based platform that helps residents in restricted areas of Dhaka, such as Bashundhara R/A, DOHS and Cantonment securely book verified maintenance workers. Customers can request services based on their needs and location. Moderators check the workers' credentials and assign bookings. Workers then manage and complete the jobs. Proyojon uses a three-role booking system with role-based access and status tracking. Besides, it has an AI chatbot feature that can provide the urgent temporary solution for the customer. This system makes hiring safer and more organized than using street vendors.

Framework

- **Frontend:** React.js, Tailwind CSS
- **Backend:** Node.js, Express.js
- **Database:** MongoDB (Mongoose ODM)
- **Authentication:** JWT for sessions, bcrypt for password hashing

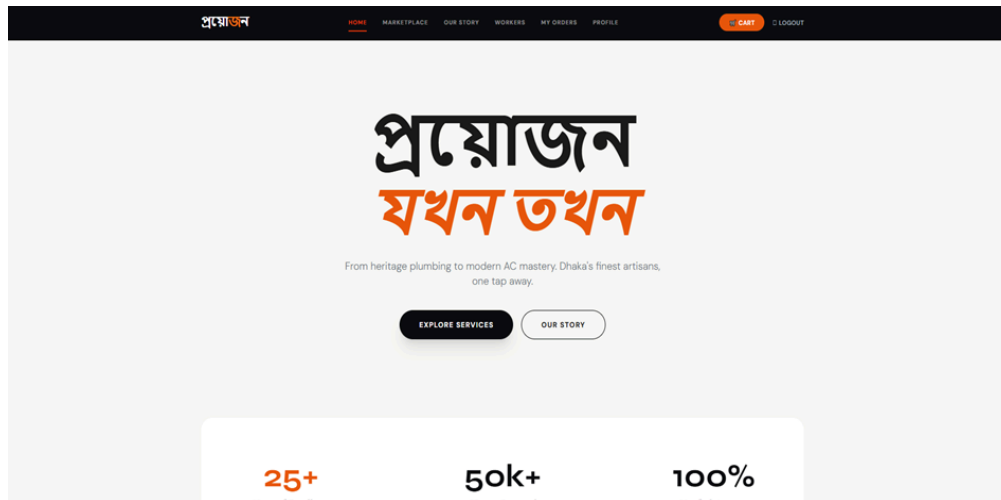

Feature

Login Page:

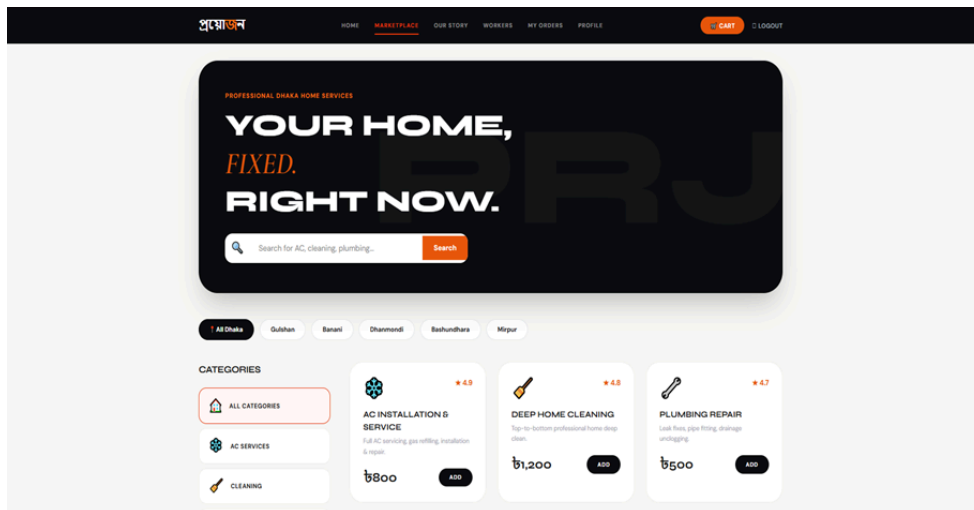

This is the login page where customers and moderators can log in to access their accounts and manage their activities on the platform.

Homepage:

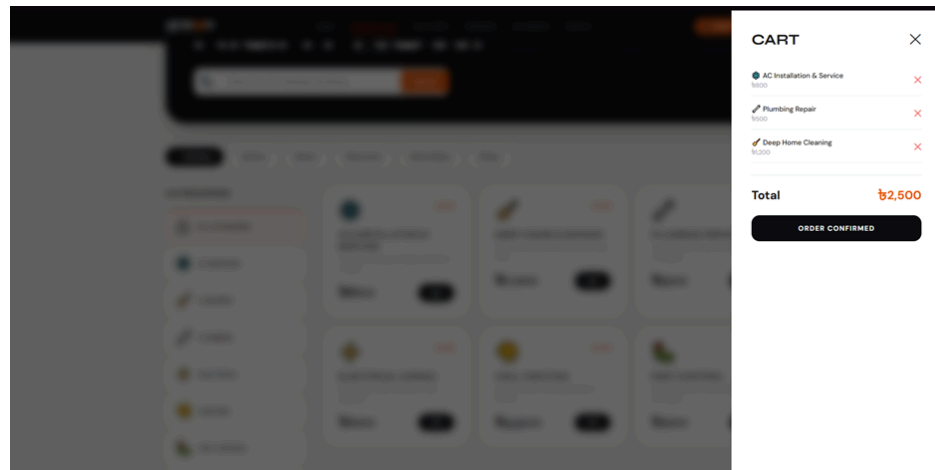

This is the homepage displayed after a user logs in. From here, users can access different features and navigate through the platform.

Marketplace:

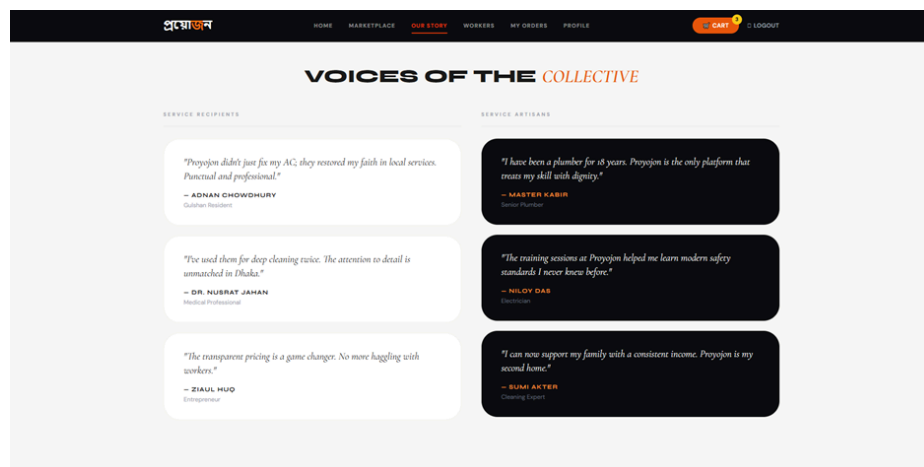

This is the Marketplace page where users can see all available service providers, search for the service they need, and add their selected providers to the cart.

Add Cart:

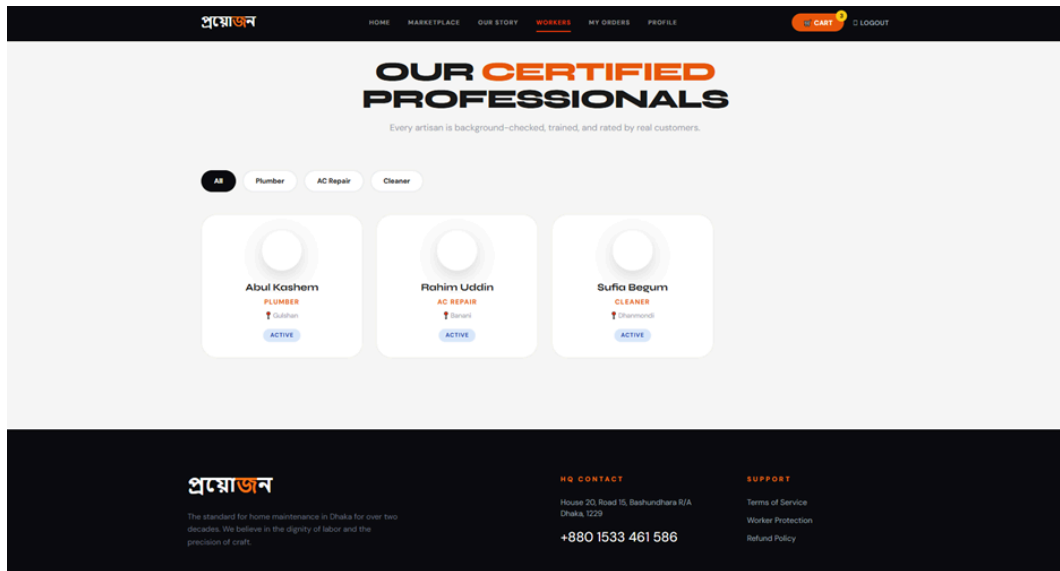

Here users can view all the service providers they have added to their cart before confirming a booking.

Our Story :

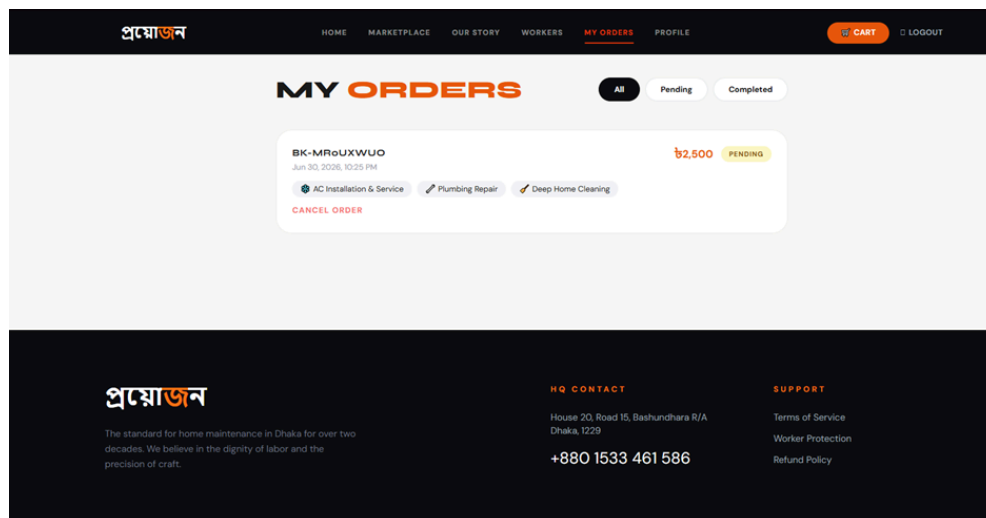

This is our Story page, where users can learn about the platform and its journey. Customers and service providers can also leave their feedback and share their experiences.

Workers:

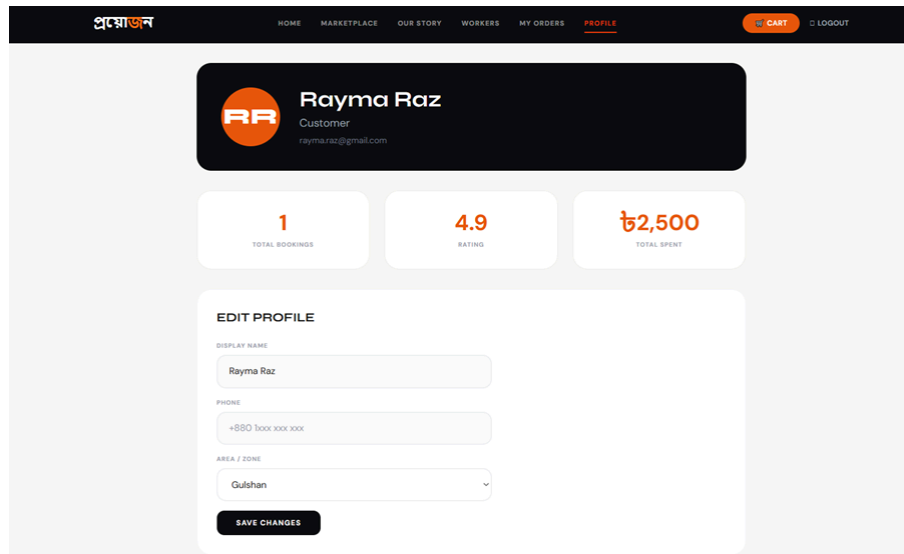

This page shows our popular and highly reviewed service providers. Users can also see whether a worker is currently active or inactive.

My Order page:

This is the Order Details page where users can see all the details of their booked services and track the status of their orders.

My Profile:

This is the My Profile page, where users can view their personal information and account details. They can also update and edit their profile information whenever needed.

Database integration

- **Customer:** name, email (unique), passwordHash, phone, residentialZone, createdAt
- **Service Provider:** name, phone, serviceCategory, verificationDocument, verifiedStatus (Pending/Verified/Rejected), coverageZones(), avgRating, createdAt
- **Moderator:** name, email (unique), passwordHash, assignedZone, createdAt
- **Booking:** customerId (ref), providerId (ref, nullable until assigned), moderatorId (ref), serviceCategory, zone, status (Pending/Assigned/Approved/Completed), description, requestedAt, completedAt
- **Review:** bookingId (ref), customerId (ref), providerId (ref), rating (1–5), comment, createdAt
